mesuEXPORT

Software function for the backup of reports

for AMD 07 systems

Can be easily retrofitted.

No hardware or software components have to be retrofitted for the use of this function. Exports can be completely configured on the metal detector. After the one-time configuration, no further manual operating steps are necessary.

Can be used flexibly

This product can be activated on most AMD 07 metal detection systems. It offers an uncomplicated option, for example, of automatically redundantly securing the results of detector tests.
